Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 31 July 2002.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 32-35 and 58-60 are rejected under 35 U.S.C. 102(b) as being anticipated by Itakura (Ref. No. EP 741,391) cited in PTOL 1449.

Itakura discloses in Fig. 1 a sample-and-hold circuit including a control signal generator (element not shown) controls $\phi 14$, $\phi 15$) for controlling an analog input signal (54) to a charge sampling circuit (Fig. 1), and an integrator (57) for integrating the analog input signal (54) [during a sampling phase (when 55 OFF and 58 ON)] responsive to a sampling signal ($\phi 14$) from the control signal generator (element controls $\phi 14$, $\phi 15$), wherein a current of the analog input signal (54) is integrated to an integrated charge (charge accumulated on 57) for producing one of a proportional voltage sample and a proportional current sample at a signal output upon completion of the sampling phase ($V = I/C \, dt$) as recited in claim 32. Element 55 reads on a sampling switch (the switch to be on only when the sampling signal from the generator is in [a sampling phase (when 55 ON and 58 OFF)]) as recited in claim 33. The control signal generator controls the integrator to hold the sample until a resetting signal from the generator is applied to a control input of the integrator (when 58 ON, node 59 is shorted to Ground, thus the limitation "resetting" is met) as recited in claim 34. The limitation recited in claim 35 is

inherent seen in the sample-and hold circuit of Itakura. The method recited in claims 58-60 are similarly rejected as above claims.

Allowable Subject Matter

Claims 36-53 and 61 are allowable over the prior art of record.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Ton whose telephone number is (703) 308-4868. The examiner can normally be reached on Monday to Thursday from 7 a.m to 5:30 p.m.
